

FULFILL YOUR POTENTIAL

Databases live at the heart of most web, desktop and mobile applications. A well designed and optimised database is fundamental to application performance giving...

IMPROVED USER EXPERIENCE

This is critical for public facing applications and helps to motivate users of internal applications.

ELIMINATED BOTTLENECKS

Cost reductions and increased client satisfaction by operating more streamlined and efficient processes.

INCREASED SCALABILITY

Greater scalability allowing applications to remain responsive as the number of users grows.

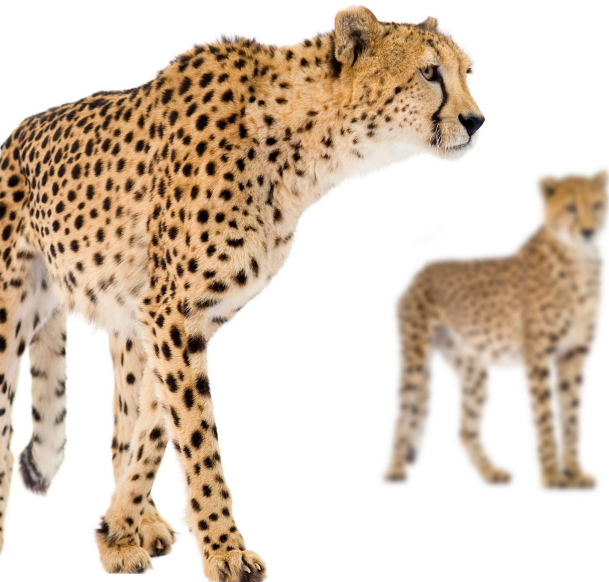

SEE OUR
TECHNIQUE AND EXPERTISE

TECHNIQUE

Our technical specialists have a wealth of experience in providing consultancy for designing new applications and improving existing products. The service is tailored to each client's needs and built around the following key steps:

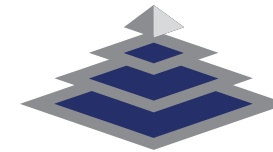

- Understand the business requirements and analyse the data-flow.
- Analyse the architecture of the entire system, or pre-determined trouble spots, to diagnose areas in need of improvement.
- Determine and document recommendations in an easily understandable way stating the proposed changes and their benefits.
- Implement recommendations resulting from the audit.

The duration of an audit is determined with your account manager prior to work commencing. The duration of subsequent development ranges from days to months depending on the level of optimization required.

EXPERTISE

At Dorset Software we understand the importance of good database design and all of our consultants receive extensive training in this area. Our Database experts have achieved their specialism through years of training and working in a professional environment with a range of technologies.
